

GILBERT IMMANUEL HASIROLAN

+6281283794106 | gilbertimmanuel13@gmail.com | <https://www.linkedin.com/in/gilbertimmanuel/> | <https://gilbertimmanuel.github.io/>

Jakarta, Indonesia

Gilbert is a fresh IT graduate specializing in Data Analytics, Machine Learning, and AI. He builds end-to-end systems that turn messy, real-world data into reproducible pipelines, predictive models, and decision-ready dashboards, from fine-tuning OCR and LLM models for Indonesian essay scoring to deploying a live football-scouting analytics app. He is drawn to problems where careful data work produces clear, defensible answers.

Education

Institut Teknologi Sepuluh Nopember - Surabaya <i>Bachelor of Information Technology, 3.75/4.00</i> - Asst. Lecturer: Data Structure Course - Thesis: Optimising Content Quality and Providing Contextual Feedback in Indonesian Essays Using Optical Character Recognition (OCR) And Large Language Models (LLM)	Jun 2021 - Aug 2025
Bangkit Academy By Google, GoTo, Traveloka  <i>Machine Learning Cohort</i> - Completed an industry ML curriculum spanning deep learning, computer vision, NLP, and cloud deployment, with English and leadership training. - Project: FoodWise – Developed ML models for a mobile app reducing food waste via expiry tracking and intelligent recipe suggestions.	Feb 2024 - Jul 2024
SMAN 81 Jakarta - Jakarta, Indonesia <i>High School Diploma in Science Major, 87.05/100.00</i>	Jun 2018 - May 2021

Experience

Avalon AI - Remote <i>Front-End Developer</i> - Cut researcher time to judge paper relevance by 20% by building interactive D3.js dashboards on ReactJS that surfaced AI summaries and topic models for non-technical stakeholders. - Lifted page-load and navigation efficiency 20% on Summasphere, an award-winning AI paper summarizer, by leading front-end work in ReactJS, D3.js, and TailwindCSS against Express APIs.	Apr 2024 - Jun 2024
A Renewal Agent 5.0 - Surabaya <i>Expert Staff of Olympiad Division</i> - Drew 136 preliminary participants and advanced 10 finalists by designing cybersecurity and machine-learning olympiad modules that scaled cleanly from preliminary to final rounds. - Ranked participant cybersecurity and ML knowledge accurately across both rounds by authoring 30 rigorous, fairness-checked assessment questions validated with faculty for integrity.	Sep 2023 - May 2024
Himpunan Mahasiswa Teknologi Informasi ITS (HMIT ITS) - Surabaya <i>Staff of Research and Technology Department</i> - Engaged 260+ students across IT fields by building and launching a certifications and competitions portal that centralized scattered opportunities into one platform. - Lifted student credential and contest participation rates by mentoring 60 students through the portal to earn certifications and enter competitions across IT fields.	Mar 2023 - Feb 2024

Projects

Real Madrid Scouting Analysis <i>Python, Pandas, Streamlit, Jupyter, Matplotlib</i> - Distilled 7,000+ player-seasons from Europe's Big-5 leagues into a ranked, role-based shortlist of 641 players by merging eight FBref tables into a cleaned pool scored against a custom tactical model. - Salvaged the project after its main data source was removed mid-build by re-architecting the pipeline around an archived snapshot read in Python, removing all live-scraping dependencies. - Built a transparent three-lens scoring engine (pool quality, tactical fit, squad need) and deployed it as a live Streamlit dashboard with per-player percentile radars for non-technical users.

Anime Analytics Dashboard

Python, Pandas, SciPy, GraphQL, Tableau

- Modeled 15,039 AniList titles into a seven-table star schema, holding genres and studios in bridge tables so many-to-many joins never inflated counts, enforced by key assertions.
- Recovered the pull after hitting AniList's 5,000-record pagination cap by re-architecting it into year-chunked requests with caching, cutting reruns to zero API calls.
- Proved source predicts score with a Kruskal-Wallis test ($H=1560$, $p<0.001$), rating light novel adaptations 9.9 points above visual novels, shipped as an eight-chart Tableau dashboard.

Indonesian Essay AI Scoring System

Python, PyTorch, TrOCR, LLM, OpenCV

- Fine-tuned TrOCR on 30,000 synthetic Indonesian handwriting samples and achieved 87.6% character accuracy, outperforming EasyOCR and Tesseract baselines.
- Built end-to-end ML pipeline integrating text detection, multi-level correction with SymSpell and LLM, and automated essay scoring with contextual feedback.
- Developed functional web application prototype demonstrating full system integration and evaluated LLM quality via RAGAS framework.

Summasphere – Research Paper Summarizer App

ReactJS, D3JS, ExpressJS, TailwindCSS

- Created an award-winning web application that helps researchers rapidly extract key insights from academic papers, featuring AI-powered summarization and topic-modelling engines.
- Led front-end development using ReactJS and D3JS, with TailwindCSS styling and ExpressJS backend integration to support interactive visualisations and intuitive dashboards.
- Enabled significant workflow improvements for researchers by allowing quick relevance assessment of literature, reducing time spent on non-essential studies and helping stay current with emerging research.

Skills

- **Programming Languages:** Python | SQL | JavaScript | Bash | PHP | HTML | CSS
- **Frameworks & Libraries:** Pandas | NumPy | PyTorch | TensorFlow | Streamlit | Matplotlib | Flask | React.js | Express.js
- **Dev Tools & Platform:** Git | Jupyter Notebook | PostgreSQL | MySQL | Tableau | Power BI | Microsoft Excel | Figma | Canva
- **Languages** 🌐: Native in Bahasa Indonesia | Full Professional Proficiency in English (IELTS 8.0)
